

Product End of Life Notification for PM450 Mobile Handheld Terminal

This notification officially announces the retirement of the PM450 Windows handheld terminal. Point Mobile has decided to retire all SKUs of the rugged handheld terminal as a part of its product life cycle management process. The products will be discontinued as of May 15th, 2021.

Recommended Alternative Product

The recommended alternative products for PM450 are more powerful PM550 and PM451. Both devices offer ergonomic form factors against conventional brick-style mobile computers, perfect for field-work-forces that require smartphone-like features as well as fast and accurate data input. Powered by Android, the operation system of choice for warehouse handheld terminals, either of the devices is ready to run the best business solutions in the market. These devices are fully rugged and versatile for the outfield, warehouse, and logistics application.

Both products are Android GMS certified, while PM451 goes further and is listed in Android Enterprise Recommended devices. All Point Mobile's Android devices are preinstalled with unique value-added service tool kit, EmKit™ (Enterprise Mobility Kit). EmKit™ supports easy utilization, solution development, and secure management of your business devices.
