

# Product End of Life Notification for PM45 Android Rugged Smartphone

This notification officially announces the retirement of the PM45 Android rugged smartphone. Point Mobile has decided to retire all SKUs of the enterprise rugged smartphone as a part of its product life cycle management process. The product's last order date is September 30, 2022.

## Recommended Alternative Products

The recommended alternative products for PM45 are more powerful PM30 and PM75. The PM30 has a 4.7-in display on top of the sleek, light, and overall smartphone-like form. Lying underneath the frame are the 2.2GHz Qualcomm processor and 4GB/64GB memory which are standard across all SKUs. It comes with Android 10 out of the box, adding the seamless user experience, battery management, and security to its benefits. The optical fingerprint sensor on the backside offers a convenient and safe data security measure. On top of the device is the ultra-slim 1D/2D scan engine, further expanding its versatility. PM30 has an IP67 dust/water resistance and withstands multiple drops from 1.5m (MIL-STD 810G). Meanwhile, the PM75 comes with a bright 5.45-in touch screen and Android 11. PM75 shows improved performance with 2.0GHz Qualcomm processor, which also supports superior wireless communication, providing a more consistent network connection and better security by adopting the technologies including MU-MIMO and WPA3. It has an IP65 dust/water resistance and 1.5m multiple-drop resistance (MIL-STD 810G). The RF750, an UHF RFID solution for PM75, is provided as an optional accessory. PM30 and PM75 are both rugged and truly versatile for any enterprise mobility application from store front, warehouse to delivery service.

Both products are Android Enterprise Recommended and preinstalled with Point Mobile's unique value-added service tool kit, EmKit™ (Enterprise Mobility Kit). EmKit supports full utilization, secure management, and solution development for your business devices.
